#### **Continuation Sheet (PTOL-326)**

Continuation of Disposition of Claims: Claims pending in the application are 81-86,89-92,94-108,112,113,121-130,132-137,140,150,160-171,173 and 177-211.

Continuation of Disposition of Claims: Claims rejected are 81-86,89,91,92,94-98,100-102,105-108,112,113,121-126,132,134-137,140,150,160-166,171,173,177-180,183-186,188,191-198,201-203,206 and 208-211.

## Election/Restrictions

Applicant's election with traverse of Group III in the reply filed on November 16, 2005 is acknowledged. Also acknowledged is the August 14, 2006 election of (1) collagen other than collagen Type I (claims 190 and 208), (2) recombinant collagen (claim 203), (3) extracellular matrix proteins (claims 184 and 210) and (4) epithelium lifted with vacuum (claims 98 and 164) with traverse.

The traversal is on the ground(s) that the species are not mutually exclusive and that there is no burden. This was deemed unpersuasive because, for example, one cannot get any more mutually exclusive than "collagen Type I" and "collagen other than Type I." The fact that the two species can be used together does not make them non-exclusive.

With respect to the argument that there is no burden to search all the species, the Examiner notes that chemical species as claimed are broken up into separate subclasses because there is a burden to search them in the same subclass. Diverse chemical species can result in vastly different properties such that the burden of examining the separate species is serious.

The requirement is still deemed proper and is therefore made FINAL.

Claims 90, 99, 187, 189, 204, 205, and 207 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Claims 90, 187 and 205 were also withdrawn because they required searching and examination of the non-elected

Application/Control Number: 10/661,400 Page 3

Art Unit: 3738

species. Applicant timely traversed the restriction (election) requirement in the reply filed on August 14, 2006.

# Claim Objections

Claims 112, 121, 124, and 161 are objected to because of the following informalities: The "and/or" conjunction makes the claim language unclear. The Examiner suggests replacing this conjunction with "or" in order to overcome this objection. Appropriate correction is required.

#### **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 81-83, 86, 89, 90, 96, and 108 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 2, 5, 8-11, 13, 15, and 16 of copending Application No. 11/183,191. The present claims

Art Unit: 3738

are read on by the copending claims. Therefore, since the copending claims can be read on "anticipated" to the present claims, it is the Examiner's position that the copending claims are clearly obvious in view thereof.

This is a <u>provisional</u> obviousness-type double patenting rejection.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 81-84, 89, 91, 92, 94-95, 97, 105, 106, 108, 183, 185, 188, and 191 are rejected under 35 U.S.C. 102(b) as being anticipated by Peyman (US 5,964,748) or, in the alternative, under 35 U.S.C. 103(a) as obvious over Peyman (US 5,964,748) alone. Peyman anticipates the claim language where the step of inserting the a lens is met by the step of inserting the solid curved material of a different refractive index because such a material is a lens; see Figure 19-27 and 32-40, column 12, line 26 to column 13, line 14 and column 14, line 39 to column 16, line 62. The vision correction device as

claimed is made of the ocular material of Peyman (428,430), and the incision as claimed is the incision (418) of Peyman. Peyman teaches either implantation into either an "intrastromal or internal pocket (126)"; see column 12, lines 40-44. Peyman also teaches forming this pocket without rupturing Bowman's membrane; see column 12, lines 49-55. Since Bowman's membrane is not to be ruptured, this suggests that the pocket is formed anterior to Bowman's membrane and between at least some of the epithelial layer and Bowman's membrane because the epithelial layer is the only layer anterior to Bowman's membrane.

Alternatively, one could interpret Peyman as the Applicants have as inserting the lens in the stromal layer. However, the Examiner asserts that inserting the lens anterior to Bowman's membrane would have been obvious to an ordinary artisan because of Peyman's suggestion of not rupturing Bowman's membrane. Furthermore, there is no criticality shown by the Applicants in the Applicants disclose indiscriminately forming the pocket in either the stromal layer of anterior to Bowman's membrane; see page 39, lines 16-26 of the present specification.

Upon review of the provisional applications relied upon for domestic priority and the Applicant's remarks, the Examiner determined that the independent claims have an effective filing date of September 12, 2002.

With regard to claim 84, Applicants are directed to Figures 46-53 and column 18, line 15 et seq.

With regard to claim 85, it was inadvertently left out of the rejection statement of the previous Office action. However, it should have been included with the first prior art

rejection supra. Clearly, the lens is inherently deformed as it is formed particularly when the material is in a semisolid state such deformation would inherently occur due to gravity acting on the device while laying on a solid surface.

With regard to claim 183, the curved surface of the ocular material is the cellular attachment element to the extent required by the claim language.

Claims 96, 100-102, 150, 178, 179 and 184 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman (US 5,964,748) in view of Brown et al (US 4,959,353). Peyman meets the claim language fully except for the application of a healing agent as claimed. However, Brown teaches that it was known to apply a healing agent to the corneal tissue after similar surgical operations; see the title and column 1, lines 15-35. Therefore, it is the Examiner's position that it would have been obvious to apply a healing agent to the cornea in the Peyman method in order to promote healing therein.

With regard to claim 100, Applicants are directed to column 4, lines 43-57 of Brown.

Claim 98 is rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman (US 5,964,748) in view of Perez (US 6,880,558). Peyman meets the claim language except for the use of a vacuum to lift up a corneal flap or corneal tissue. However, Perez teaches that it was known to do the same in similar procedures; see Figure 5 and column 10, lines 35-58. Therefore, it is the Examiner's position that it would have been obvious to lift the flap or tissue in the Peyman procedure with a vacuum as taught by

Art Unit: 3738

Perez for the same reasons that Perez does the same and in order to reduce trauma to the corneal tissue as compared to other tissue moving procedures in the art.

Claims 121-123, 126, 132, 140, 160, 163, 165, 166, 173, and 192 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman (US 5,964,748) in view of Miller (US 6,335,006). Peyman meets the claim language except for the use of a liquid to loosen the epithelial layer as claimed. However, Miller teaches that it was known to use liquids of various types to loosen epithelial layers; see column 1, line 65 to column 3, line 29. Therefore, it is the Examiner's position that it would have been obvious to use the Miller procedure to loosen the epithelial tissue in Peyman's process for the same reasons that Miller does the same and in order to promote a clean separation of the tissue layers.

Claims 112, 113, 124, 125, 134-137, 161, and 162 are rejected under 35
U.S.C. 103(a) as being unpatentable over Peyman and Miller as applied to claims 121123, 126, 132, 140, 160, 163, 165, 166, 173, and 192 above, and further in view of
Perez (US 2003/0220653). Peyman as modified by Miller fails to teach the use of a
hypertonic solution to loosen the epithelial layer. However, Perez teaches that such
solutions were known to the art at the time the invention was made; see paragraph
[0150]. Therefore, it is the Examiner's position that it would have been obvious to utilize
a hypertonic solution for the loosening procedure of Miller for the same reasons that
Perez utilizes the same and in order to prevent the use of toxic residues to the eye
tissue that could cause toxicity problems after surgery.

The hypertonic solution subject matter of Perez has an effective filing date of January 17, 2002 based upon provisional application 60/350,003; see paragraphs [0050] to [0052] thereof and see MPEP 2163.03 III that is incorporated herein by reference.

With regard to claims 134-137, Applicants are directed to see paragraphs [0094] to [0105] of Perez.

Claim 164 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Peyman and Miller as applied to claims 121-123, 126, 132, 140, 160, 163, 165, 166,

173, and 192 above, and further in view of Perez (US 6,880,558). Peyman as modified by Miller fails to disclose the use of a vacuum lift corneal tissue during corneal procedures. However, However, Perez teaches that it was known to do the same in similar procedures; see Figure 5 and column 10, lines 35-58. Therefore, it is the Examiner's position that it would have been obvious to lift the flap or tissue in the Peyman procedure with a vacuum as taught by Perez for the same reasons that Perez does the same and in order to reduce trauma to the corneal tissue as compared to other tissue moving procedures in the art.

Claim 171 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Peyman and Miller as applied to claims 121-123, 126, 132, 140, 160, 163, 165, 166,

173, and 192 above, and further in view of Peyman (US 2004/0015234). Peyman ('748) discloses utilizing various instruments to make incisions in the cornea, but fails to teach that use of a microkeratome. However, Peyman ('234) teaches that it was known to utilize a microkeratome to make incisions in similar corneal procedures in the art.

as compared to other procedures of the art.

Therefore, it is the Examiner's position that it would have been obvious to utilize a microkeratome to make the incisions of Peyman ('748) for the same reasons that Peyman ('234) utilizes the same and in order to make a very clean and precise incision

Page 9

Claim 177 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Peyman and Miller as applied to claims 121-123, 126, 132, 140, 160, 163, 165, 166,

173, and 192 above, and further in view of Brown (US 4,959,353). Peyman as modified by Miller fails to disclose the application of a healing agent as claimed. However, Brown teaches that it was known to apply a healing agent to the corneal tissue after similar surgical operations; see the title and column 1, lines 15-35. Therefore, it is the Examiner's position that it would have been obvious to apply a healing agent to the cornea in the Peyman method in order to promote healing therein.

Claims 180, 192-196, 201, 202, 206, and 209 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman (US 5,964,748) in view of Cumming (US 5,984,914). Peyman at least renders the claimed invention obvious as explained in the rejection of claim 81 under Sections 102/103, but Peyman fails to disclose the use of cooling as claimed. However, Cumming teaches that is was known to cool ablated tissue when forming a pocket to prevent further damage due to heat; see claims 1 and 8 as well as column 3, lines 58-63. Therefore, it is the Examiner's position that it would have been obvious to cool the eye tissue during pocket formation for the same reasons that Cumming did the same.

"Ochtron Hambon: Toroch, To

Art Unit: 3738

Claim 211 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Peyman and Cumming as applied to claim 194 above, and further in view of Nigam (US 6,361,560). Peyman fails to disclose the use of a microkeratome to form the pocket as claimed. However, Nigam teaches that it was known from pockets with microkeratome within the art; see column 1, lines 40-44 and column 3, lines 26-32. For this reason, it is the Examiner's position that it would have been obvious to form the pockets of Peyman with a microkeratome for the same reasons that Nigam does the same and because such devices are widely available to an ordinary artisan.

Claim 107 was indicated as rejected in the Office Action Summary but not placed in a rejection statement. However, it is clearly not allowable due to the fact that Nigam teaches that the use of a microkeratome to form pockets in corneas was known. For this reason, any subsequent Office action may include claim 107 as being unpatentable in view of the teachings of Nigam.

Claims 197 and 198 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman and Cumming as applied to claim 194 above, and further in view of Perez (US 2003/0220653). Peyman as modified by Cumming fails to teach the use of a salt and water solutions to the cornea. However, Perez teaches that such solutions were known to the art at the time the invention was made; see paragraph [0150]. Therefore, it is the Examiner's position that it would have been obvious to utilize a hypertonic solution for the loosening procedure of Peyman for the same reasons that Perez utilizes the same and in order to prevent the use of toxic residues to the eye tissue that could cause toxicity problems after surgery.

Claims 186 and 190 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman (US 5,964,748) in view of Isseroff et al (US 2002/0039788). Peyman discloses making lenses out of collagen but not out of recombinant collagen as now claimed. However, Isseroff teaches that it was known to make similar corneal repair materials out of recombinant collagen. For this reason, it is the Examiner's position that it would have been obvious to utilize recombinant collagen as the collagen of Peyman for the same reasons that Isseroff uses the same or for improved healing properties.

Claims 203 and 208 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman and Cumming as applied to claim 194 above, and further in view of Isseroff et al (US 2002/0039788). Peyman discloses making lenses out of collagen but not out of recombinant collagen or collagen other than Type I as now claimed. However, Isseroff teaches that it was known to make similar corneal repair materials out of recombinant collagen or collagen other than Type I. For this reason, it is the Examiner's position that it would have been obvious to utilize recombinant collagen as the collagen of Peyman for the same reasons that Isseroff uses the same or for improved healing properties.

Claim 210 is rejected under 35 U.S.C. 103(a) as being unpatentable over Peyman and Cumming as applied to claim 194 above, and further in view of Brown (US 4,959,353). Peyman fails to disclose the use of growth factors such as healing agents as claimed. However, Brown teaches that it was known to apply a healing agent to the corneal tissue after similar surgical operations; see the title and column 1, lines 15-35.

Therefore, it is the Examiner's position that it would have been obvious to apply a healing agent to the cornea in the Peyman method in order to promote healing therein.

### Response to Arguments

Applicant's arguments filed August 2006 have been fully considered but they are not persuasive.

With regard to the arguments that the Peyman rejection is not tenable, the Examiner has modified the rejection to explain how the claimed invention is at least obvious in view thereof.

In response to the argument that the effective filing date of Perez (US 20030220653) is not prior to the effective filing date of the independent claims September 13, 2002, the Examiner notes that domestic priority for the relevant subject matter reaches back to January 17, 2002; see paragraphs [0050] to [0052] of provisional application 60/350,003, and see MPEP 2163.03 III that is incorporated herein by reference.

#### Allowable Subject Matter

Claims 103, 104, 127-130, 167-170, 181, 182, 199, and 200 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Page 13

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Applicant should specifically point out the support for any amendments made to the disclosure, including the claims (MPEP 714.02 and 2163.06). Due to the procedure outlined in MPEP 2163.06 for interpreting claims, it is noted that other art may be applicable under 35 USC 102 of 35 USC 103(a) once the aforementioned issue(s) is/are addressed.

Applicant is respectfully requested to provide a list of all copending applications that set forth similar subject matter to the present claims. A copy of such copending claims is respectfully requested in response to this Office action if the application is not stored in image format (i.e. the IFW system) or published.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Paul B. Prebilic whose telephone number is (571) 272-4758. He can normally be reached on 6:30-5:00 M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on 571-272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
